SUMMARY

Backend engineer and technical cofounder focused on building high-performance systems and optimizing the architectures behind them. I like owning problems end to end, from first design through production, and I do my best work on hard technical challenges where the right approach isn't obvious yet. I design for scale and for the people who have to operate the system later, contribute to open source, and keep learning as the ground shifts.

EXPERIENCE

Technical Cofounder, GaurData

Feb 2026 – Present

Hyderabad, India · [gaur.run](#) · [LinkedIn](#)

- Cofounded GaurData, a runtime that turns a team's operational and business data into governed APIs, dashboards, and AI interfaces defined by data contracts. Built the whole product solo, from backend and frontend to infrastructure and deployment.
- Built the entire product surface in TypeScript on TanStack Start with a Node.js server runtime, deployed on Cloudflare: server functions and API routes, SSR and streaming, session auth, and end-to-end type safety from the database to the UI. Used Cloudflare for edge routing, caching, DNS, and object storage.
- Wrote the Node.js/TypeScript service layer for data ingestion, webhooks, scheduled jobs, and third-party integrations, with typed API contracts shared across the app.
- Wrote the Rust backend for query orchestration, contract execution, and workspace isolation, backed by a PostgreSQL control plane (state, jobs, permissions, vector search) and a DuckDB layer that runs each workspace's analytics separately.
- Built a consumer AI agent scoped to each workspace that only queries the data contracts a team has defined, so it answers questions without ever touching raw data.
- Built an exploration AI agent that writes SQL against ingested data to help users explore it and turn findings into new data contracts.
- Ran all the infrastructure on Hetzner with Nix and NixOS: systemd services, Caddy routing, PostgreSQL, and object storage, fronted by Cloudflare.

Senior Backend Developer, Factly Research & Media

Apr 2024 – Jan 2026

Hyderabad, India

- Designed and built Gopie, a query system with a REST API that lets people analyze data using natural language.
- Built and maintained the Node.js and TypeScript API layers and services behind tagore.ai's AI fact-checking, which made it faster and more accurate, including request validation, streaming responses, and typed clients.
- Built Meterus, a cloud metering service in Rust that uses ClickHouse as its OLAP store for usage data.
- Mentored junior developers and set the team's coding standards and review practices across the TypeScript, Go, and Rust codebases.

Backend Developer, Factly Research & Media

Feb 2023 – Mar 2024

Hyderabad, India

- Worked on ruspie, a Rust query engine, and made it faster at reading and processing CSV and Parquet files.
- Connected Claude, GPT, and LLaMA into tagore.ai's fact-checking pipeline through Node.js/TypeScript services and tuned the prompts to cut down on hallucinations.
- Wrote supporting microservices for ruspie in Rust and a chat-history service for tagore.ai in Go.

Backend Developer Intern, Factly Research & Media

Sep 2022 – Jan 2023

Hyderabad, India

- Built ruspie from scratch, a Rust query engine for reading and analyzing CSV and Parquet files, and wired it into Factly's existing workflows.
- Added features to ROAPI (open source) and wrote test coverage for Kavach, an in-house auth service built on the Ory stack.

SKILLS

Languages: TypeScript · JavaScript · Rust · Golang · Python · SQL

Backend & Systems: Node.js · System Architecture · API & Contract Design · RESTful APIs · GraphQL · Microservices · Query Engines · Database Optimization · Multi-tenant Isolation · Distributed Systems · AI Agents · Vector Search

Data & Infrastructure: PostgreSQL · DuckDB · ClickHouse · MongoDB · SurrealDB · Redis · Kafka · Cloudflare (Workers, R2, CDN) · Docker · Nix/NixOS · GCP · Hetzner · Caddy

Frontend & Practices: TanStack Start · React · Next.js · Tailwind CSS · CI/CD · TDD · Code Review · Technical Leadership · Open Source

EDUCATION

B.Tech, Electronics and Computer Engineering

Jun 2023

Sreenidhi Institute of Science and Technology, Hyderabad, India · CGPA: 7.27/10
